Education

Indian Institute of Information Technology

Bachelor of Technology

August 2023 – May 2027

Jabalpur, Madhya Pradesh

Courses: Data Structures and Algorithms, Operating Systems, Computer Networks, System Design

Technical Skills

Languages: C++, Java, TypeScript, ExtendScript, Python, Kotlin, Rust

Developer Tools: Ubuntu/Linux, Git, GitHub, VS Code, Android Studio, Adobe Premiere Pro, Expo

Technologies/Frameworks: React, React Native, Tailwind, Git, Next.js, Node.js, MongoDB

Networking & Systems: Electrum, Bitcoin Core RPC, UTXOs, privacy-preserving address queries

Experience

Summer of Bitcoin - CoinSwap

May 2026 – Present

Software Developer Intern

Wyoming, USA – Remote

- Redesign the CoinSwap's **node synchronization layer** to replace a centralized RPC dependency with a lightweight **peer-distributed Electrum protocol**, improving fault tolerance and enabling operation across network nodes.
- Construct an **address-pool privacy layer** to obfuscate wallet address lookups by mixing real wallet queries 3–5x decoy addresses per request, reducing address-linkability during Electrum sync.
- Build a **Kotlin-based interface** that abstracts distributed wallet state (UTXO sets, sync status, balance aggregation) into a unified Android UI, decoupling the presentation layer from underlying node communication.

PlanetRead

October 2025 – February 2026

Software Developer Intern

Bangalore, Karnataka – Remote

- Architected an offline-first **React Native** application with a local **AsyncStorage caching layer** to reliably capture 50+ telemetry events per session, including video watch time and view counts, during unstable network conditions.
- Designed a fault-tolerant synchronization pipeline using **Supabase PostgreSQL**, batching and uploading 10,000+ cached records after reconnection while maintaining data consistency across mobile clients operating on 2G/3G networks.
- Implemented secure backend data flows using **Row Level Security** and server-side functions, improving reliability of telemetry ingestion for low-connectivity user environments.

Code for GovTech DMP

June 2025 – September 2025

Open Source Intern

New Delhi – Remote

- Wrote an ExtendScript plugin for Premiere Pro that **parses SRT/TXT subtitle files and stamps 500+ timeline markers in under 5 seconds**, a task that previously required manual frame-by-frame placement.
- Reverse-engineered the MOGRT parameter exposure model in Premiere Pro to **inject subtitle text directly into Motion Graphics Templates**, reducing manual subtitle creation effort by 65% across multilingual content pipelines.
- Engineered a modular execution architecture that loaded **feature-specific logic only at runtime**, preventing Premiere Pro from freezing on projects with 1,000+ markers, a known crash point for large ExtendScript workflows.

Projects

Smart Hybrid Delivery | React, Node.js, Express, MongoDB, WebSockets

[YouTube Demo](#)

- Spearheaded a real-time fleet coordination backend using Node.js, Express, MongoDB geospatial queries, and WebSockets to **track 50+ simulated EV/drone nodes with low-latency location updates**.
- Architected a **multi-modal route assignment engine** that dynamically allocates deliveries between EVs and drones based on load, range, and proximity, reducing average route time by 30% and eliminating manual dispatch logic.

VisionBoard | React, Appwrite, TinyMCE, React Hook Form, Tailwind CSS

[GitHub](#)

- Developed a **session-based authentication system** on Appwrite handling 400+ users, implementing compound database indexing strategies that reduced query response latency by 40%.
- Built a secure text rendering pipeline using **DOM serialization and HTML parsing** applying content sanitization and structured data handling to safely render untrusted HTML from 400+ users without XSS vulnerabilities.

Achievements

- Mastered **750+** problems across various coding platforms: [Leetcode](#), [Codeforces](#).
- Selected for [Summer of Bitcoin 2026](#) (International) and [Code for GovTech 2025](#) Open Source Programs.
- [Smart India Hackathon Grand Finalist 2025](#) (Top 5 out of 1,42,000+ submissions).
- Newbie 2.0 Girl Winner** – Competitive coding contest at IIIT Jabalpur.
- Published an automation extension on [Adobe Exchange](#) (Adobe's Official Site).

Extracurriculars/ Certifications

- Programming club core member:** Mentored and managed 30+ juniors on their programming journey.
- Completed the **Postman API Student Expert Certification**, demonstrating proficiency in API development.
